

How a payment works, step by step

The journey of one visitor, Sara, from the form to her ticket — and what you see in the admin. Screens marked **Real today** are the website as it is right now. Screens marked **Planned** are drawings of what the backend plan will build; the real pages will look like the site, not exactly like these drawings.

1 Sara fills in her details

On the website · **Real today**

Name, phone, email, city, specialty, ticket type. A student also uploads a photo of the university ID. A pop-up asks “Is everything correct?” because the name goes on the certificate.

2 She chooses how to pay

On the website · **Real today**

Four tiles: Visa, MasterCard, FIB, FastPay. The tile says what will happen next — card details on the secure page, or “opens in your app”. No card number is typed here, ever.

3 She checks the summary and presses “Complete registration”

On the website · **Real today**

EN كوردی العربية

Visa

Order summary	Edit
Professional ticket	Price soon
Lunch · Day 1	Price soon
Total	Price soon

☒ I understand that tickets are non-refundable, and I agree to receive my payment link and ticket by email.

Step 3 of 3

← Back Complete registration

Her details, the order total (ticket + lunch), and the non-refundable notice. The total says “Price soon” until you set the prices in the admin — the drawings below use **175,000 IQD as an example**. **What the button does today:** shows the success screen and says a payment link will come by email. **After the backend:** steps 4–9 below.

4 Our server saves her and creates the payment

On our server · **Planned**

Behind the scenes — nobody sees this	
Registration	ISM26-K7P2QX · Sara Ahmed Karim · unpaid
Amount	150,000 IQD (ticket) + 25,000 IQD (lunch day 1) = 175,000 IQD — fixed by the server
To Psoola	“Create payment 175,000 IQD, method Visa, reference ISM26-K7P2QX, notify us at .../psoola-webhook”
From Psoola	payment id PS-88213 + the address of its payment page

Sara's registration exists from this moment — even if she never pays, you can see her as *unpaid* in the admin. The price comes from the admin settings, never from her browser.

5a Visa / MasterCard: she types her card on Psoola's page

On Psoola's website · **Planned**

The screenshot shows a mobile browser interface with the address bar displaying 'pay.psoola...'. The page title is 'Psoola secure payment'. It displays card information: 'iSmile 2026 — ISM26-K7P2QX' and '175,000 IQD'. Below this, there are input fields for 'Card number' (containing '4111 1111 1111 1111'), 'Expiry' (containing '09/28'), and 'CVV' (containing three dots). The 'Name on card' field contains 'SARA AHMED'. At the bottom, there is a large blue button labeled 'Pay 175,000 IQD'. A small green note at the bottom states: 'Card details stay with Psoola. iSmile never sees them.'

The address bar shows Psoola, not ismile.krd. The bank may show a one-time code screen (3-D Secure) before approving.

5b FIB / FastPay: her app opens and she approves

In the FIB or FastPay app · **Planned**

The screenshot shows the FIB app interface. The title is 'Payment request'. It displays transaction details: 'To iSmile 2026 (via Psoola)', 'Reference ISM26-K7P2QX', 'Amount 175,000 IQD', and 'From account 4471'. At the bottom, there are two buttons: a large blue button labeled 'Approve with PIN' and a smaller white button labeled 'Decline'.

Same for FastPay, in pink. Nothing is typed on a website; she confirms inside the app she already trusts.

6 Back on our site: “Checking your payment...”

On the website · **Planned**

This page decides nothing. It only waits for step 7. That is the rule that makes the system safe: the visitor's browser can never say “I paid”.

7 Psoola tells our server — and we double-check

Psoola → our server · **Planned**

Webhook received 09:42:07	
Message	“PS-88213 succeeded, 175,000 IQD” · signature ✓ valid
We ask Psoola's API	“Status of PS-88213?” → paid, 175,000 IQD ✓ matches
Result	ISM26-K7P2QX → paid · ticket T-000412 created · email queued
If the message comes twice	ignored — one payment, one ticket
If it never comes	every 10 min we ask Psoola ourselves

Only here — after our server has confirmed with Psoola — does a ticket exist. A fake message without the signature, or with a wrong amount, changes nothing and is logged.

8 “You're in!” — and the ticket email arrives

On the website and in her inbox · **Planned**

 ismile.krd 9:42

You're in, Sara!

Your ticket has been sent to
sara@example.com

Ticket T-000412

From: iSmile 2026 <tickets@ismile.krd>
Subject: Your ticket — iSmile 2026

Sara Ahmed Karim · Professional ·
Lunch day 1
20–21 November 2026 · Grand
Millennium Sulaimani

T-000412 · ISM26-K7P2QX

PDF ticket attached · Tickets are
non-refundable

Within a minute of step 7. In her language.
If it fails, the admin shows it and you press
Resend.

9 What you see in the admin

In your admin · **Planned**

Registrations · search “Sara”

Reference	Name	Type	Paid	Ticket
ISM26-K7P2QX	Sara Ahmed Karim 0750 123 4567 · sara@example.com	Professional + lunch D1	paid Visa · 175,000	sent T- 000412

Buttons: Resend ticket · Add workshop · Edit · Export

Workshops Microscope endodontics — booked by phone 3 Oct,
paid cash **paid**

Every step above left a record: the registration, the payment attempt with Psoola's ID, the webhook, the ticket, the email status. Nothing is done by hand, and nothing is only in someone's WhatsApp.

10 At the door

Summit day, check-in desk · **Planned**

Scan the QR from the email or the PDF, or type a name. A second scan says “already checked in at 08:55”. No internet? The printed list from the night before.

What is different from a “card form on our site”: in step 5a Sara's card number goes to Psoola, never to ismile.krd. That keeps us out of the card-industry security rules and means there is nothing on our server for anyone to steal. It is the same way airlines, hotels and most shops do it: your site, their payment page, back to your site.

What happens when something goes wrong

✕ Card declined, app payment refused, or she closes the page

Planned

Step 7 never says “paid”, so no ticket. Sara stays **unpaid** in the admin. Within a few minutes she gets an email with a “**Pay now**” link — one tap starts a fresh Psoola payment for the same registration. No form to fill again. One reminder after 3 days.

🕒 Bank is slow — Psoola confirms 20 minutes later

Planned

The “Checking your payment...” page tells her “we will email you”. When the confirmation arrives — or when our 10-minute check asks Psoola and hears “paid” — the ticket goes out. She never has to come back to the site.
